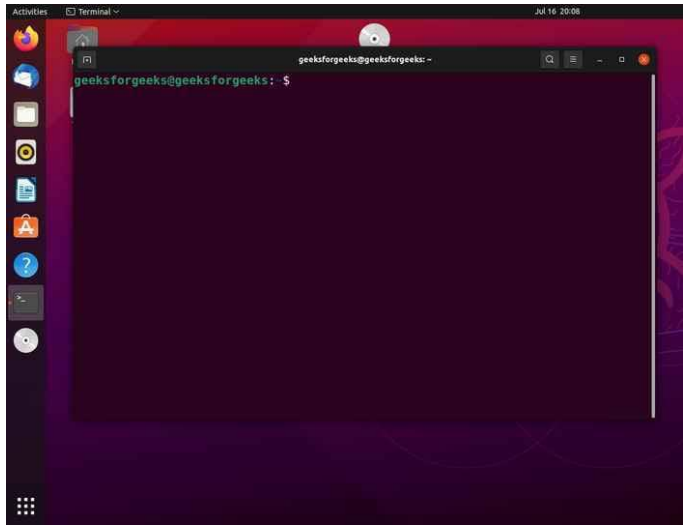
Python Commands

Andrea Moglia, Marco Paracchini

Laboratory of Nearable Technologies for Health Data Science
A.Y. 2025/2026

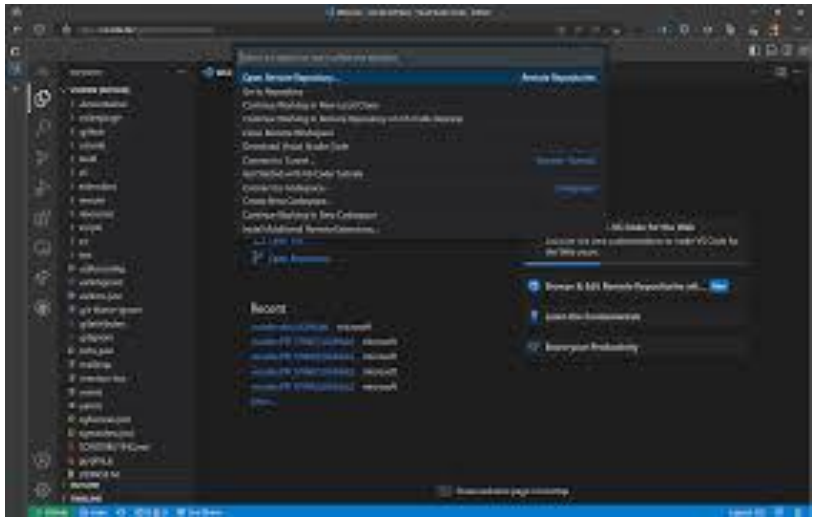
Tool You Need

Terminal of your OS



OR

IDE (e.g., Visual Studio Code)



Virtual Environments in Python

Check if Python is installed/ check version number:

python –-version (Global o local installation)

Create a Virtual Environment

python -m venv myenv

Activate the Virtual Environment

Windows:	Mac/ Linux:
.\Scripts\activate	source myenv/bin/activate

Deactivate a Virtual Environment

deactivate

Virtual Environments in Python

For Windows users:

In case of error remember to check the Execution Policy by running in Terminal:

Get-ExecutionPolicy

If it returns **Restricted**, you need to allow script execution (every time you create a virtual environment):

Set-ExecutionPolicy Unrestricted -Scope Process

For a **permanent solution**:

Set-ExecutionPolicy RemoteSigned -Scope CurrentUser

Installing Python Packages

Installing a Python package

pip install package_name

Check package version

import package_name
package_name.__version__

Installing a specific package version

pip install package_name==1.2.3

Installing Numpy, Matplotlib, Pandas, scikit-learn, Scipy

pip install numpy, matplotlib, pandas, scikit-lerarn, scipy

Installing Pytorch

From Pytorch Official Website

https://pytorch.org/get-started/locally/

PyTorch Build	Stable (2.10.0)			Preview (Nightly)	
Your OS	Linux		Mac		Windows
Package	Pip		LibTorch		Source
Language	Python			C++ / Java	
Compute Platform	CUDA 12.6	CUDA 12.8	CUDA 13.0	~~ROCm 7.1~~	CPU
Run this Command:	`pip3 install torch torchvision --index-url https://download.pytorch.org/whl/cu126`				

Recommended to have a GPU (and CUDA installed)

Check your Device

Check where your Pytorch code is executed

```
device = "cuda" if torch.cuda.is_available() else "cpu"
print(device)
```

You need "cuda" to run your DL code in the GPU
If you get "cpu" your code runs on the CPU (way slower than GPU)

Check the Cuda version

```
print(torch.version.cuda)
```

or

```
nvidia-smi
```

Check the GPU name

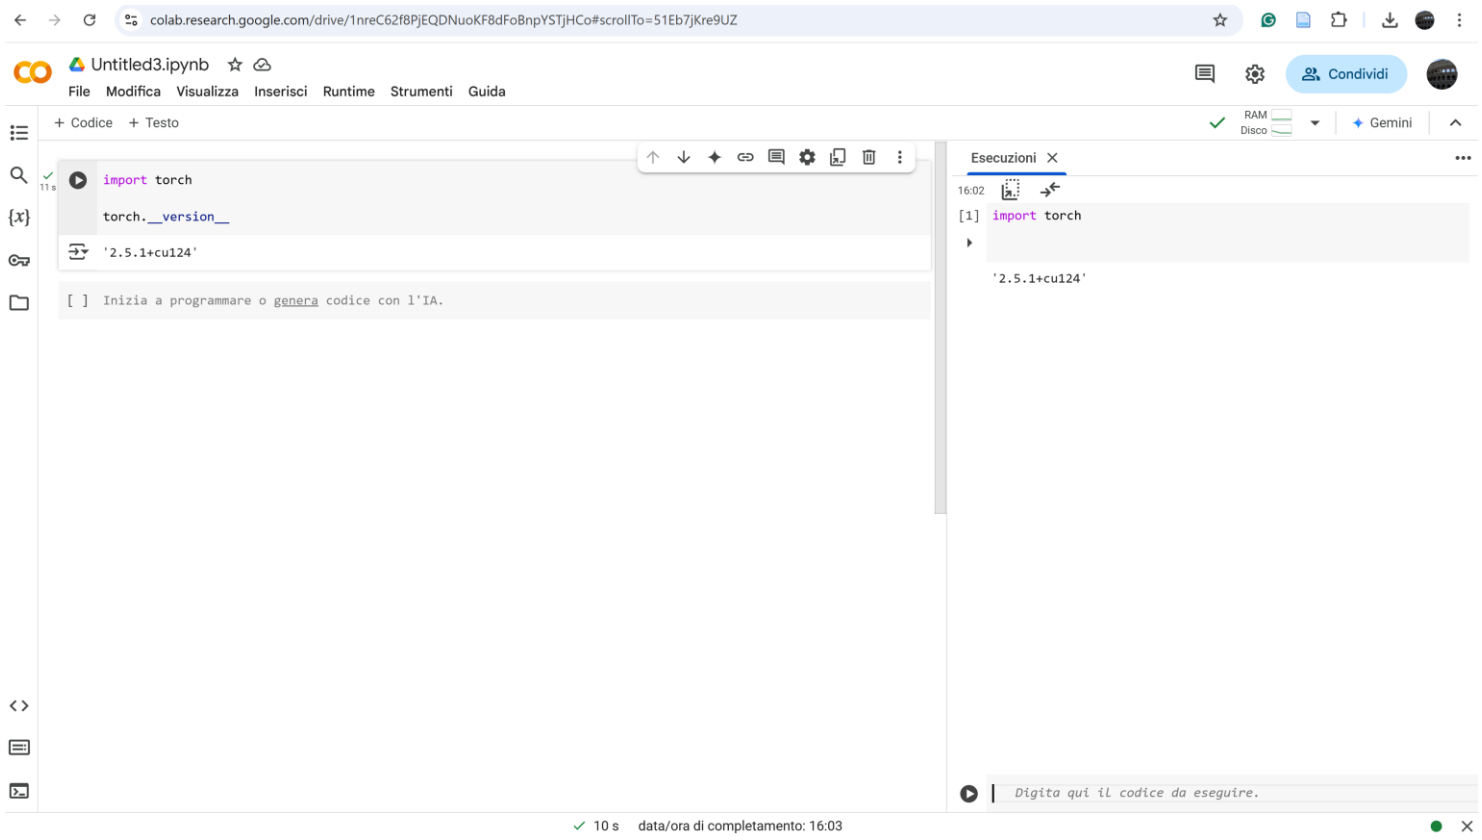
```
print(torch.cuda.get_device_name(0))
```

or

```
nvidia-smi
```

If you Need a Fast GPU?

Solution 1: Google Colab



Solution 2: Our Servers
